SUMMARY

AWS-certified full-stack engineer working deep in the TypeScript ecosystem — Next.js, NestJS, React, and Node on PostgreSQL and AWS, with hands-on LLM integration through Bedrock. I led a four-developer greenfield rebuild of a production booking platform, delivering in six months what the prior vendor took eighteen to build. I own code review and production releases on every engagement I lead.

EXPERIENCE

Senior Software Developer / Tech Lead

Aug 2025 – Present

RevStar Consulting, Remote

- Led a four-developer greenfield rebuild of a production sports-team housing booking platform, delivering full functionality in six months — a third of the time the previous vendor needed. Live now with an active feature roadmap.
- Architected and built bed-level booking, document management, and event-triggered email automation on Next.js, NestJS, and PostgreSQL, replacing spreadsheet unit tracking and disconnected guest and vendor communication tools with a single platform.
- Own code review and production deployments across the engagement. Stood up AWS infrastructure with Terraform and integrated SonarQube quality gates into CI/CD.
- Built front ends and hardened APIs for AWS Bedrock-powered chatbot and knowledge-base products, delivering two proofs of concept end to end as the sole developer.
- Technical lead in front of the client on multiple concurrent engagements: I lead discovery and requirements calls, produce estimates, scope features, manage the delivery board, and advise stakeholders on technical direction.
- Built a Vercel v0 design-to-code pipeline adopted across a forty-developer practice, letting product managers prototype directly against project boilerplates. Co-lead the org-wide standard for AI-assisted development after evaluating Claude Code and Kiro.
- Run the developer talent pipeline: technical interviews, hiring recommendations, and structured six-to-nine-week mentorships for incoming engineers.

Software Developer

Jan 2024 – Jul 2025

IClassPro Inc., Remote

- Researched, designed, and helped build a microservice integrating the core platform with a third-party payment gateway, selecting architectural patterns for reliability and scale.
- Owned the microservice's production release process, coordinating with QA to protect application stability across deployments.
- Shipped features, fixes, and enhancements across a large-scale Angular, React, and Laravel class-management codebase on an agile team spanning QA, DevOps, and the Chief Architect.

Software Developer (Contract)

2023

RevStar Consulting, Remote

- Six-week contract engagement delivering maintenance and ticket-based development for a client platform. Rehired in 2025 as tech lead.

Freelance Developer

May 2022 – Dec 2024

McCabe Software Solutions LLC, Remote

- Built a desktop project-management application in Python, PyQt6, and SQLite with a conditional documentation checklist, automated document filing, and report generation that replaced manual weekly and monthly report assembly.

SKILLS

Languages	TypeScript, JavaScript, Python, SQL, HTML5, CSS3
Frameworks	Next.js, NestJS, React, Node.js, Express, Tailwind CSS, Material UI, Angular, Laravel, React Native
Cloud and data	AWS Bedrock, AWS Amplify, Terraform, CI/CD, SonarQube, PostgreSQL, MongoDB, SQLite
Practices	REST API design, Microservices, Code review, Production release ownership, LLM integration, AI-assisted development (Claude Code, Kiro)
Delivery	Solution architecture, Estimation and scoping, Technical leadership, Stakeholder advising, Agile / Scrum, Azure DevOps, Jira

EDUCATION AND CERTIFICATIONS

AWS Certified Developer – Associate, Amazon Web Services	Mar 2026
Full-Stack Web Development Bootcamp, DigitalCrafts	2022 – 2023
Associate of Engineering Management Technology, University of Arkansas Grantham	2021
